Sustainable Finance.Live 2026

October 2026 | Live in London and Online

Investing in Thriving Communities

Conference October 20th 2026

Hackathon: October 16th to October 28th

In person at Events @ NO 6, Aldgate, London and online

©Finextra Research Ltd 2026. All rights reserved.

Conference, Workshop & Hackathon 2026

Conference
Lean back
October 20th
09.00–16.00
Keynotes, panels and workshop drill into the detail of Investing in thriving communities, planning and delivery of a growth agenda for people, profit and planet.

Showcase
Lean in
October 20th
09.50 -11.00
Problem statement & live showcase.

16.00 to 19.00
Drinks, Canapes and networking

Hackathon
Learn by doing
October 16th to 28th
Teams work on their hacks

Bootcamp	October 16th
Hackathon	October 16th to 27th
Submissions	October 27th 2-3 P.M.
Pitches	October 28th 10-12 A.M.
Judging	October 28th 1-2 P.M.
Awards	October 28th. 3-4 P.M.

© Sustainable Finance | Confidential

Agenda

11.00 - 11.15	Introduction and problem statements	Richard Peers
11.15 – 11.30	One Planet (What/How)	Pooran Desai
11.30 – 11.45	Grassroots Economics (What/How)	Will Ruddick/Mohammed Sohail
11.45 – 12.00	Satellite Application Catapult	Liz Scott/Danyal Hussain
12.00 - 12.15	Teams platform and Resources	Richard, David
12.15 - 12.30	Audience Q&A	All

©Finextra Research Ltd 2026 All rights reserved.

Judges and Mentors

Sadia Ahmed
Market Innovation Lead, Deloitte UK

Chryssi Chora
Director, TerraEvra

Richard Conway
CTO, Acora

Gerrit Sindermann
Executive Director
Green Digital Finance Alliance

Darshna Shah
Chief AI Officer, Acora

Anna-Marie Slot
Founder, Transition Value Partners

David Gristwood
Freelance Technologist

Donna Lyndsay
Founder, Lyndsay Consulting

Five stuck systems, one shared unlock

What is broken today, and what becomes possible when communities are banked

	Communities	Local initiatives	Banks	Society	Government
PROBLEM TODAY	Underfunded and disconnected, with essentials of life unaffordable	Underbanked and treated as small, risky commercial bets	Clubs and charities scored as high risk, low value	Banking is not serving the public good	Central policy feels distant, missing or mistrusted
OPPORTUNITY	**Communities become the primary change agents**	**Activate locally, then scale to own responsibility**	**Regenerative finance: better risk data, AI, DeFi, tokenisation**	**A shared-resource model with trust built in**	**Local empowerment drives positivity and the SME economy**

Hackathon: a marketplace that makes opportunity, contribution, assets, funding, outcomes and stewardship liquid — locally, then at scale.

A marketplace for community liquidity

from a visible local problem to a community-owned asset, with liquidity at every stage

1. Surface Liquidity of opportunities	2. Match Liquidity of contribution	3. Fund Liquidity of funding	4. Deliver Liquidity of assets	5. Measure Liquidity of ecological and well being outcomes	6. Steward Liquidity of stewardship
Local needs and underused assets are made visible in one place: the flooded pitch, sewage overflow, spare fields, allotments, rooms, kitchens, tools, distressed assets such as homes and high streets.	People and organisations are matched to micro-activities — volunteer time, wildlife trust expertise, technical skills, building, planning, nutrition, legal etc. Small acts aggregate into systemic outcomes.	Capital flows to verified activity. A community bank improves lending to the clubs etc. aggregates fragmented payments and prices governance and risk appropriately.	Shops, homes and high streets become community owned assets. Built and restored under local control using re-generative finance. Nature-based solutions are built reed beds and wetlands filter contamination and buffer flooding; marginal pitch becomes allotments feeding the community kitchen.	Restoration is measured, attributed and made tradeable as nature and carbon credits. Participation and impact are tracked transparently.	Land, housing and high street assets transition into community ownership, stewardship or shared governance. Value created is reinvested locally.
Community marketplace · for local clubs, residents and stakeholders	**Volunteers · Wildlife Trusts Sports coaches, Charities local government, technical partners**	**Community banks · local government, philanthropy**	**Community Land Trust , local government, NGO's, developers, wildlife trusts , contractors. sports teams, community kitchen**	**CreditNature , Stabiliti, Hants & IoW Wildlife Trust, Sporta, BNG +**	**Community Land Trust, high street partnerships, Local Government, community interest groups.**

Continuous circular flow: value created at each stage is reinvested, so the chain restarts with a stronger community balance sheet.

Start

Re-generative banking for community assets. Sharing data across the marketplace. Pricing risk with better metrics, AI, DeFi and tokenisation.

Stop

Scoring clubs and charities as high risk, low value. Funding fragmented one-off community projects. Making communities integrate services manually.

Continue

Focusing on value, speed and measurable outcomes. Growing continuous deal flow. Building trust, cohesion and the local SME economy.

Problem Statement 1 | Problem Statement 2 | Problem Statement 3 | Problem Statement 4

Collaboration Reverse Challenge

Communities involve many stakeholders and overlapping plans, often stored in different systems and formats. While objectives may align, strategies can conflict or duplicate efforts — wasting time and resources.

This problem statement will be introduced by an established 'actor', outlining their goals, constraints, and opportunities. Hackathon teams will apply fresh thinking and tools to design a clear vision and practical solution for successful delivery.

The briefing will be shared at the bootcamp.

Idea Starter

- Use the One Planet system, which creates a digital representation of socio-economic-ecological systems. Here, plans become interconnected nodes within a living network rather than static documents. Its graph database connects outcomes, actions, organisations, places, and frameworks into a unified knowledge graph.
- Could you use Agentic AI to create autonomous agents that query this system via APIs, combine insights, and take next action?
- How might these tools be applied to solve the actor's challenge?

Pooran Desai

Agenda

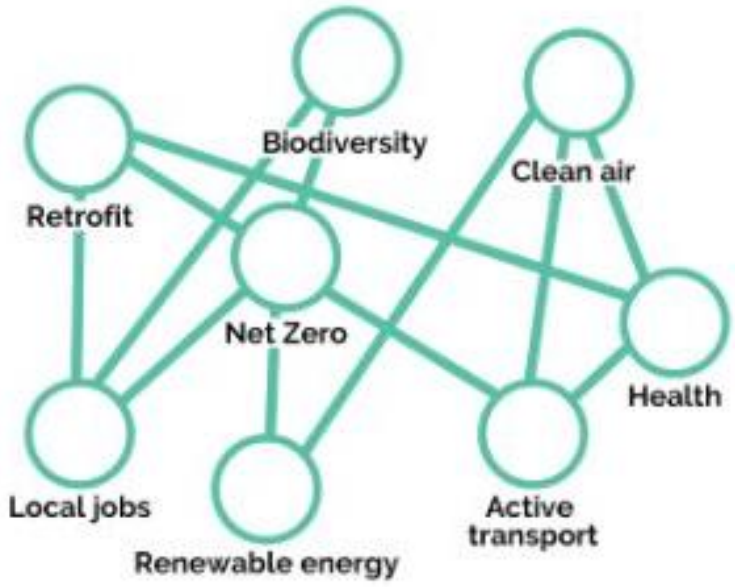

- Intro to OnePlanet and why we have built it
- The SFLive Challenge
  - Context
  - Your hypothetical client
  - Your task
- Hackathon instructions

Intro to OnePlanet

ISSUES

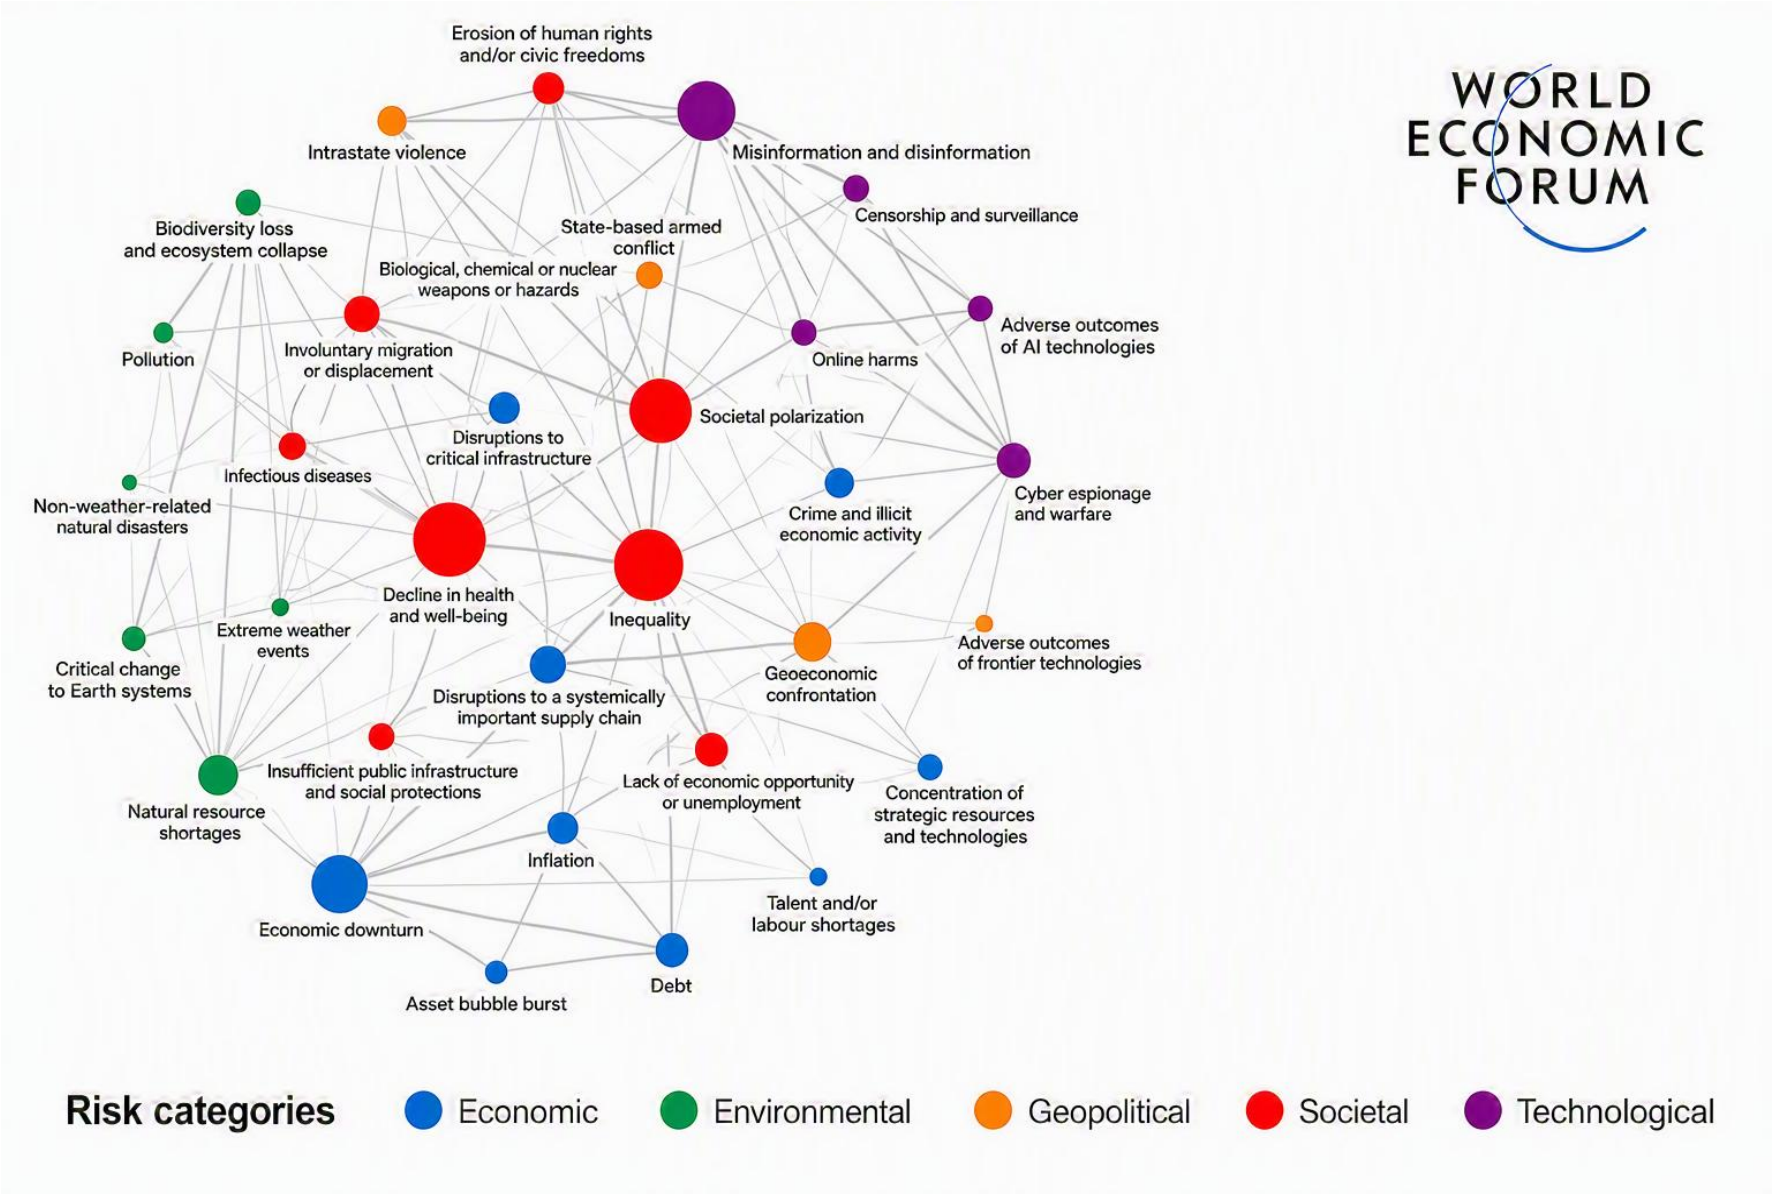

OUTCOMES

Reality is massively interconnected

World Economic Forum Global Risks Report 2025

Systems Approach

- ‘Systems not Silos’
- [‘System of Systems’]
- Marketplaces

30+ years of practical experience

- Health and happiness
- Equity and local economy
- Culture and community
- Land and nature
- Sustainable water
- Local and sustainable food
- Travel and transport
- Materials and products
- Zero waste
- Zero carbon energy

For being more joined-up

- Internally within an organisation
- Externally with stakeholders, customers, suppliers
- When managing complex partnership
- Linking to government local/regional/national policies

SFLive Challenge

Context

- Reality is massively interconnected yet we try to solve problems in silos.
- Health, jobs, climate, food and economy are all inextricably linked and interdependent.
- e.g. we spend £242 billion pa on the NHS but 80% is on avoidable disease caused by factors such as diet, lifestyles, poor housing and air pollution
- If we were more joined-up we could save £billions as well as being happier and healthier.

Challenge Problem Statement

- Brighton Resilience Partnership (BRP) – planned new citizen-led community group aiming to build a resilient and sustainable city across health, food, water, jobs, renewable energy and community ownership.

- OnePlanet is helping BRP.

- A number of different city policy strategies have been uploaded into OnePlanet and converted into Outcomes, Actions and Indicators

- This enables BRP to see how it might best contribute to a set of joined-up city-wide ‘Global Outcomes’ by comparing different strategies and identifying synergies, conflicts, opportunities and gaps.

Your mission – help BRP

Design & fund joined-up projects which deliver as many co-benefits as possible

e.g. transform disused car park into community orchard (co-benefits to food, community engagement, reducing flood risk, air quality, nature, community ownership)

Can we help BRP link to local sustainable suppliers/contractors?

Could BRP become a Community Land Trust

Can we quantify the co-benefits and harvest money for avoided costs (from NHS and insurance companies for avoiding paying out on flood damage)?

Use satellite data to help? (Earth Observation Hub, Satellite Application Catapult)

Hackathon Instructions

Steps

1. Explore OnePlanet.com for background and case studies
2. Set up free account
3. Email me pooran.desai@oneplanet.com to request connection to the SFLive Sandbox
4. Explore the ‘Brighton Resilient City Global Outcomes’ and the various Plans
5. Look at interconnections using ‘Connections’
6. Connect your AI using our MCP (see PDF instructions uploaded separately)
7. See screen grabs in the following slides
8. Always feel free to contact me and/or connect on Linkedin

Thank you

pooran.desai@oneplanet.com

Liz Scott

Geospatial Solutions Architect | Council member and Director at AGI

CATAPULT Satellite Applications

Danyal Hussain

Cloudscaler

Technical Support

©Finextra Research Ltd 2026. All rights reserved.

Teams platform and resources

Richard Peers and David Gristwood

©Finextra Research Ltd 2026. All rights reserved.

Resources

Data, API's and mentors from Satellite Applications Catapult, Earth Observation Data Hub, One Planet and Grassroots Economics.

Mentors from a variety of firms that can help with ideation, solution design and market-fit.

A wide list of datasets and APIs will be provided and some free compute subscriptions for AWS and Microsoft cloud.

Individuals will be matched with others to build suitable teams for the various problem statements.

Microsoft Teams will be provided with a structure designed for the hackathon to support collaboration and mentor support.

Teams will be in two classes 'Established' and 'Emerging'

Winners will be included in Finextra editorial, the SF.Live report, and interviewed on

Finextra TV e.g. How Multi-AI Systems Can Reduce Exposure to Nature-Related Risks

Introductions can be made to accelerators and VCs where appropriate.

Pitch Day

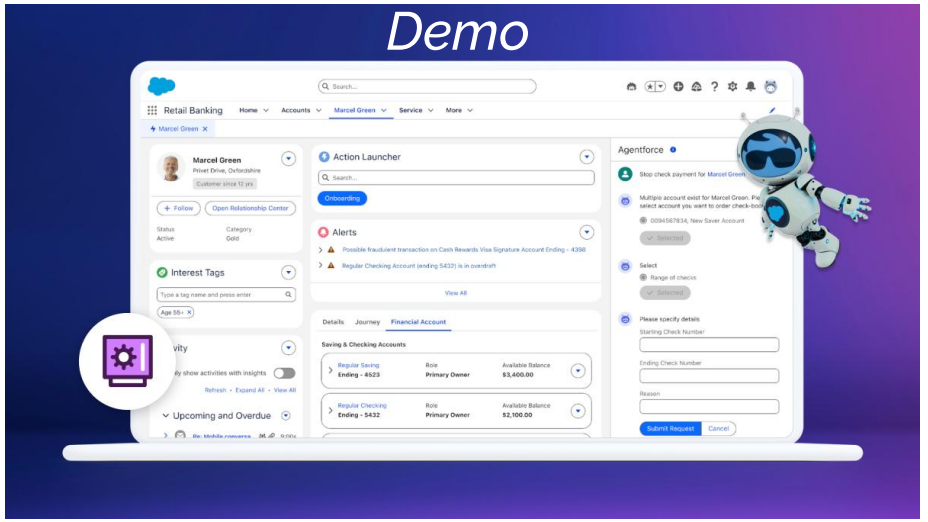

- Eight minutes per team
- Teams meeting should be in your calendar
- Present as much as you can in the allotted time to address the criteria

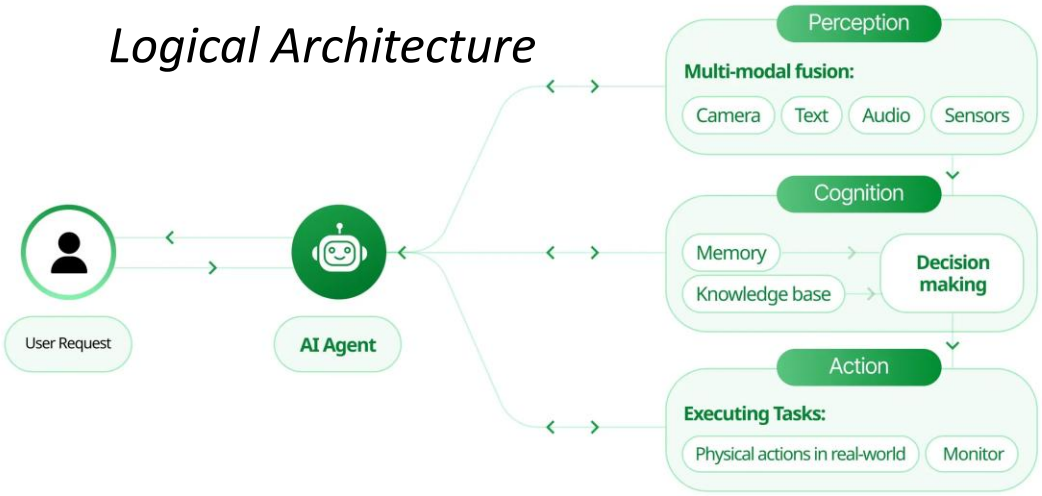

©Finextra Research Ltd 2026. All rights reserved.

Judging Criteria

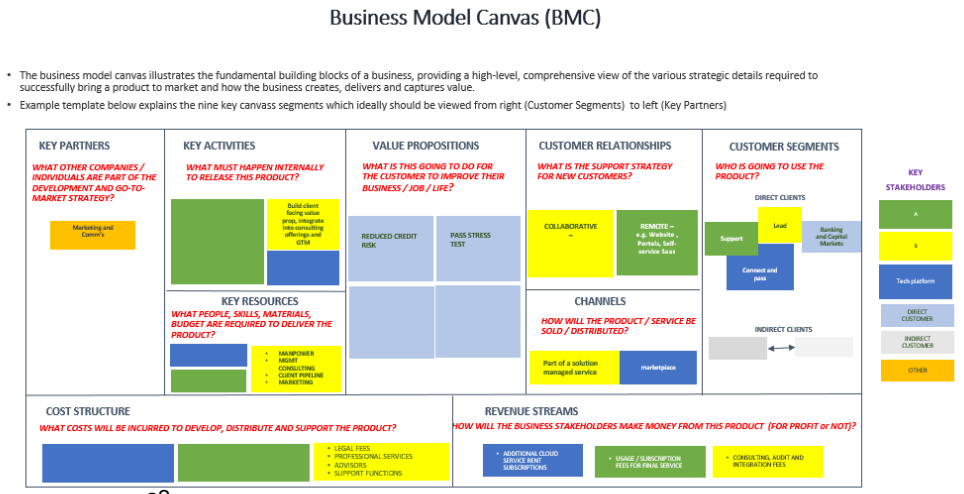

- Business Idea
- Technical Implementation
- Use of Datasets
- Presentation
- Feasibility
- Scalability
- Impact potential
